DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 6/28/2007 has been entered.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.
- 3. Claims 1 and 10-12 are rejected under 35 U.S.C. 102(e) as anticipated by, or in the alternative, under 35 U.S.C. 103(a) as obvious over Goodman et al (US 6454865).

Goodman et al disclose a deposition chamber and a rotatable (Col 3 lines 13-17) susceptor with a recess to hold a substrate and gas inlets into the recess and out lets from the recess- there are three channels and any of them could be used as supply channel or as discharge channel from the recess (Fig 35). Further, the gas inlet/outlet is connected to an arm, which sits under a groove at the rear of susceptor (See Fig 16 and Col 25 lines 9-42).

Application/Control Number: 10/626,675

Art Unit: 1763

Regarding the limitation of the groove having curved shape the groove to hold the arms could be several curved shapes as disclosed in Fig 8, Fig 21-62, Fig 22 and Fig 32.

Regarding the addition of a limitation of notch Goodman et al disclose grooves or notches on the side (Fig 16-62) and where the inlets and outlets also join.

Regarding a shape adapted to supply or discharge gas, the inlets and outlets have shape to enable flow of gas.

Response to Arguments

Applicant's arguments filed 6/28/2007 have been fully considered but they are not persuasive.

Regarding applicant's argument that in Goodman et al gas is supplied through the recesses provided at the bottom. This however is not commensurate with the scope of the claims since the notch and groove in Goodman et al is at the side as well as at the rear according to the claim.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Ram N. Kackar whose telephone number is 571 272 1436. The examiner can normally be reached on M-F 8:00 A.M to 5:P.M.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Parviz Hassanzadeh can be reached on 571 272 1435. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
